To

H.IV.

In view of the filarial survey conducted here by the Malaria Institute of India last March, April and May, and in view of the very high blood infection rate (24%) of filariasis here and in view of the fact that we have already commenced mass therapy here in one of our wards by giving free treatment of Hetrazan, we request you to advise the Central Government to station one unit of the National Filariasis Control Units in Mangalore to tackle the problem.

(True extract)

(H.IV)
H.E.L.A.DEPT.

With reference to the minutes of M.(H.) extracted on page 1 ante it is submitted that the B.C.G. Vaccination Campaign on a mass scale in the State has since been sanctioned with 6 field teams and one Central Administrative Unit at Madras. The mass B.C.G. Vaccination Campaign has been inaugurated at Coimbatore on 14-11-54. As soon as the Campaign over, the teams will go around the Districts where the incidence T.B. is very high, starting from Urban areas first.

When the Campaign is extended to the South Kanara District, the Mangalore Municipality will certainly have the benefit of the Scheme. But as the Mangalore Municipality has agreed to meet the cost of maintaining one B.C.G. Team for the introduction of one B.C.G. Vaccination in its area, an extract of the Memorandum at 'R' on p.1 ante may be forwarded to the D.P.H. for consideration and necessary action. The draft memo. is submitted for approval.

16/11/54.

Final sanction of the Govt. of India for the National Filaria control programme allotting one control unit and two survey units for this State has been received and communicated to the D.P.H. for submission of detailed proposals for the implementation of the programme. The D.P.H. had already been agreed that the control unit should be located in the West coast to cover Mangalore & Kozhikode Municipalities. Final orders on this point will be issued when the D.P.H's proposals for the implementation of the programme are approved.
